

TCS 2025–2026 Placement Preparation Guide for B.Tech Students

This document summarizes the TCS hiring process, technical stack expectations, recent hiring trends, eligibility criteria, and practical preparation tips for B.Tech students targeting TCS placements in the 2025–2026 cycle.

1. TCS Hiring Process (2025–2026)

Round 1 – Online Assessment (TCS NQT)

- Numerical Ability
- Verbal Ability
- Reasoning Ability
- Advanced Quant & Reasoning
- Coding Problems

Round 2 – Technical Interview

- Data Structures & Algorithms
- OOP, DBMS, OS basics
- Project discussion
- Coding/tracing questions

Round 3 – Managerial Round

- Communication skills
- Teamwork & leadership
- Relocation and flexibility
- Situational problem solving

Round 4 – HR Interview

- Tell me about yourself
- Why TCS?
- Career goals
- Document verification & joining discussion

2. Technical Stack TCS Prefers

Programming Languages:

- Java
- Python
- C/C++
- JavaScript
- C#/.NET

Frameworks:

- Spring Boot
- React
- Node.js
- Django / Flask

Databases:

- MySQL
- Oracle
- PostgreSQL
- MongoDB basics

Cloud & DevOps:

- AWS
- Azure
- Docker
- Kubernetes
- Git & Jenkins

AI & Analytics:

- Python for AI/ML
- Pandas / NumPy
- Power BI
- API awareness

3. Recent Trends & News (2025–2026)

- TCS is reducing mass fresher hiring and focusing on skill-based hiring.
- Strong emphasis on AI-assisted development and automation.
- Digital and Prime roles are getting more attention.
- Coding ability, communication, and projects matter more than certificates.
- Students with cloud, AI, and automation awareness are preferred.

4. Eligibility Criteria

Academic Criteria:

- Usually 60% or 6.0 CGPA throughout academics.
- Digital/Prime roles may expect 7.5–8.0+ CGPA.

Eligible Branches:

- CSE, IT, ECE, AI/ML, Electrical and most engineering branches.

Backlog Policy:

- Usually 0–1 active backlog allowed during interview process.
- No active backlog at joining.

Package Range:

- Ninja: ■3.3–4.5 LPA
- Digital: ■7–7.5 LPA
- Prime: ■9–11+ LPA

5. Preparation Tips for 3rd-Year Students

1. Master One Programming Language

Choose Java or Python and practice coding daily.

2. Practice Aptitude Regularly

Focus on quant, reasoning, and verbal ability for NQT.

3. Build One Strong Project

Understand your project deeply and explain it confidently.

4. Learn CS Fundamentals

Prepare DSA, DBMS, OOP, OS, and SQL basics.

5. Improve Communication Skills

Practice HR questions and mock interviews.

6. Suggested 6-Month Roadmap

Month 1–2: Aptitude + Programming Basics

Month 3–4: DSA + Projects

Month 5: Technical Interview Preparation

Month 6: HR Practice + Full Mock Tests

Mini Projects Ideas:

- Student Management System
- Expense Tracker
- Quiz App
- AI Resume Analyzer
- Attendance System

Final Advice:

TCS and similar IT companies increasingly value adaptable engineers who can combine coding, communication, problem-solving, and AI awareness. Consistency, projects, and practical learning matter more than memorization.
